Water Hygiene Services

Legionella Risk Assessment, Monitoring Control, Remedial Action & UKAS Water Testing

Water Hygiene Services is a specialist independent Legionella control contractor. Water Hygiene Services specialise in assisting organisations in the prevention, control and compliance of the risks associated with Legionella Bacteria (in line with HSE ACOP L8), for a variety of clients such as Universities, Colleges, Hospitals, Local Authorities & Facilities Management.

Mechanical Services

Water Hygiene Services provides a specialist service in all aspects of pump diagnostics, pump refurbishment & new installation.

- Plumbing services
- Mains water bypass
- TMV installation
- Dead leg removal
- GRP water tank replacement
- Mains cold water systems (boosted and tank fed systems)
- Threaded and welded pipework
- Full electrical controls package with our working partners
- Domestic hot water systems
- Copper pipework

Mains Chlorination BS8558:2015

It is a requirement that many new private water supply pipes are commissioned before they are connected to mains water services. Water Hygiene Services can provide BS8558:2015 mains disinfection services and sampling of new and existing mains pipework. We can work on anything from short lengths of new mains alone to new mains and full building disinfection prior to connection and handover.

We provide disinfection certificates at the time of work and provide full UKAS microbiology results from an independent laboratory approximately 5 days later.

Legionella Training Services

Water Hygiene Services offers a comprehensive range of Training Services covering Water Hygiene, Plumbing, Water Testing & Sampling, and Legionella Control including:

- Training – at clients' premises or off-site as required. Water Hygiene Services specialise in training responsible staff in legionella control techniques.
- Legionella risk assessments.
- On site task training
- Certification e.g. on-site DWS chlorination and log books.
- Troubleshooting and problem solving including remote endoscopic surveys.
- Service & maintenance packages.

"Water Hygiene Services have been carrying out legionella risk assessments for us for a couple of years now. We have been very happy with their very high standard of work, their ability to work to tight deadlines and the general professional service they provide."

Richard Waudby
Engineering Surveyor,
NPS Humber Ltd

"Ingram Road Primary have been working with WHS since 2011. They are very helpful, and complete a full risk assessment prior to their monthly monitoring so you know exactly where any problems may lie. They also offer a full remedial service too which is competitively priced and would recommend them to other establishments."

Julie Greaves
Office Manager,
Ingram Road Primary School

"We hired WHS to complete our Legionella risk assessments throughout our UK portfolio. The price was right and the job was carried out quickly while maintaining good communication. I would recommend them."
